EMERGING OPPORTUNITIES IN BIG DATA ANALYTICS

Arti S

In the world before us, changes are occurring in all spheres and the world of careers is not untouched by these changes. Many jobs of the past have lost their relevance and a number of new job and career opportunities have come up. Many subjects have grown in their dimension providing more opportunities to researchers and job seekers in those subjects. Data science is one of such subjects.

Statistics is a subject that deals with numbers and data. Data science is also now an independent subject. But Big Data Analytics, though a combination of Statistics and Data Science, is much more than these two. The emergence of big data analytics has created many new opportunities for businesses, organizations and job seekers that we will see in this article.

As the information age is moving ahead we are finding ourselves in an increasingly data rich and data oriented world. Data can be defined as a set of characters collected and used for specific purposes. These characters may be in the form of numbers, words, audio or video,

observations or descriptions. To make sense of data, it needs to have some context. For example random numbers 42, 45 and 51 have no meaning, but if we say that these are averages ages of employees in three different departments in an organization, it will be termed data. Many conclusions can be drawn with such data.

Data is being generated since ages but never had we seen such huge amount of data as we see today. Almost everything a big company does today is dictated by

data and analytics in one way or the other. Organizations are now using sophisticated analytics tools and techniques to identify new growth areas, reduce costs, increase profits, make better decisions and devise more effective budgets. Data analytics has made its entry in every industry be it healthcare, consumer goods, entertainment or any other.

What Big Data means?

For a long time, companies used limited and highly structured data, generated mostly internally. Examples include

transaction and customer related data. Now companies access outside data as well which may comprise of data of other companies, markets and social media etc. This data is used for company's own advantage. Organized or unorganized, put together, it becomes a huge dataset of dynamic nature. This world of data is called big data. So big data is massive data being created at high velocity. Big data is characterized by three 'Vs'-Variety, Volume and Velocity.

What is analytics?

Analysis is a familiar term for us and we know its meaning. Analytics is the science of analysis with tools developed for the purpose and is done with specified objectives. Thomas Davenport in his famous book 'Competing on Analytics' has defined bigdata analytics as "The extensive use of data, statistical and quantitative analysis, exploratory and predictive models and fact-based, management to drive decisions and actions".

When analytics is applied on big data, it is termed as Big Data Analytics. Such analytics can be divided into the following-

CIVIL SERVICES INTERVIEW : PROBABLE QUESTIONS AND HOW TO TACKLE THEM

Part-III

S B Singh

Any interview, more so an Civil Services interview, is mainly about questions being raised by board members and answers being offered by the candidates. Thus, anticipating questions and formulating their answers is an important part of the interview preparation. After acquainting oneself with the purpose and technique of the interview, one must turn one's attention on creating a pool of probable questions on a variety of topics and formulate their answers, explanations that sound logical and acceptable to the interview board. This exercise will minimise the surprise element during the interview session in that most of the questions will appear to have been asked on expected topics.

Area wise analysis of questions

I. Educational background: In this section, questions will pertain to the name of school, college, subjects studied there and performance in terms of marks or grades obtained. You must know what is the significance of the name of your

school/college, when and by whom it was established, any alumni you can recall from the institution you have studied in etc. Say for example, if you have studied in a school called 'Navodaya Vidyalaya' you should know the objectives of such schools, your personal experience about it, values inculcated by you from your association with the school.

II. Parental background: In some cases, they will also take interest in your parents occupation by asking you as to what you have learnt from their

professional experience, and if your parents are role models for you.

III. Work experience: If you have worked in private sector or under government, they will definitely ask you couple of questions related to your job description. You are expected to know what your organisation is all about, details of tasks performed by you, why you want to leave that job and want to join civil services, how your job experience can help you in your career in civil services.

IV. State to which you belong: A wide

range of questions will be raised on your state. Its cultural, historical importance, law and order situation, governance, performance on various economic indicators, state of agriculture, industrialisation, resources available and solutions to various problems of your state, will constitute areas on which questions will be asked.

V. Hobbies, extra curricular activities:

On your hobbies, questions are meant to assess your genuine interest in what you pursue as your hobby. If reading is your hobby, whether you read fiction or non fiction, who is your favourite author, which books you have read recently, are going to be likely questions. Similarly, if watching documentaries or photography is your hobby, they will delve deep in the subject to find out your level of commitment and interest in the stated hobby. Say for example, you have mentioned watching wildlife documentaries as your hobby, you will be asked to name a few famous Indian and foreign documentary makers, whether you have watched their documentaries or not. If you are not able to recall any famous wild life documentary maker's name, then it is going to leave a poor

CIVIL SERVICES INTERVIEW : PROBABLE QUESTIONS AND HOW TO ...

impression before the board. Similarly, if you have mentioned yoga or meditation as your hobby, expect both theoretical and practical questions on these hobbies. For example, what is the underlying philosophy of yoga, who was its main proponent, what books you have read on yoga, who are leading yoga experts, will be areas of interest for the board members to ask questions. This way, you should frame likely questions on your different hobbies and fortify your knowledge on them.

VI. Why you want to join

Civil Services: During the interview session, the common refrain is - "Why you want to join civil services." Almost every candidate is asked this question by one or another member of the board. Though this question is common, it does not mean answer to it should be common too. Rather than sounding

idealistic, you should offer a realistic answer to this question. Answers like - I want to serve the nation, or I want to serve the society, or, It offers a diverse, challenging career, looks like an old, repetitive cliché used by every candidate. A more realistic answer to this may be: "I want to join civil services for a number of reasons. First, it offers job security. Second, it offers some of the most coveted jobs under the government. Third, I will derive higher job satisfaction in civil services because of its diverse nature. Four, I consider civil services not just a job but a service with a deep public interface. Finally, it will provide me an opportunity to be a part of the governance system of the country which will allow me to contribute meaningfully to public service. If you phrase your answer like this, you are likely to

sound more realistic about the civil services.

Another related question here can be: how your knowledge of your discipline of study (engineering, medicine, agriculture, botany etc), can be used in administration. To this, you should say that such domain knowledge will help you understand the issues better and will be handy to make better policies and decisions. You can substantiate this answer with some examples. For example, If you are from medical background, you can say that it will help you formulate more practical health policies with your first hand knowledge of medical issues. Like this, find relevance of your educational discipline in civil services before you face the interview board.

Similarly, there will be some questions whose answers you may not know. There may be two

ways to tackle them. First, if you don't know anything about the question, just politely accept it and say you don't know the answer. Second, if you have some vague idea about the question, ask the board if you can try to attempt it with some guess. If allowed, make an intelligent guess and answer it.

VII. Situation based

questions: Not always, but in many cases, one of the board members may raise situation based questions. This can be either on a real situation that has appeared in news, or a hypothetical one. In both types of situations, real or hypothetical, your answer must weigh in all factors and then provide a solution that sounds implementable on ground, beneficial to the country or citizens and innovative in thinking. For example, consider this situation: A private company was asked to close down its plant because its product manufacturing process was posing dangers to environment and people's health. However, the company has facilities to produce oxygen in large quantity which can help overcome oxygen crisis in the country in the wake of corona resurgence. The company has made a request to you to permit it to reopen the plant so that it can produce and supply much needed oxygen. Will you allow it to be reopened if you are the authority to decide it. Now, your answer should be based on putting priority on protecting human life by accelerating oxygen production from all possible sources. Since the company has approached you for permission, you will consider it on most urgent basis. But at the same time, you will also consider the fact that the company was closed due to environmental hazards, and therefore, it should not be allowed to operate permanently in the garb of producing oxygen. Your concern for environment will remain and you will grant it only temporary and conditional permission to produce oxygen only and not its mainline product it was manufacturing before its closure. By this, the objective of meeting oxygen requirement will be met without compromising on the environmental risks the company can pose again.

VIII. Current affairs: Since corona is making most of the news for a long time, expect a number of corona related questions on its health, economic, and social ramifications. vaccine production and distribution, vaccine diplomacy, vaccine nationalism, vaccine passports, are issues at hand now that can be framed as questions. Why second wave occurred, was it preventable, how to contain the second wave, whether third wave may also occur - these are most likely questions.

As regards international

issues, Indian foreign policy in corona times, our disputes with neighbours like Nepal and China will surface during the interview. Abraham accords, quad, Indo Pacific policy, waiving of patents in corona times, role of UNO, WHO during the pandemic, India's relations with China, Russia, USA could be areas of interest to the interview board. Also, comparison between SAARC and BIMSTEC, India's stand on military coup in Myanmar, Rohingya crisis, India's opposition to BRI and CPEC, opting out of RCEP, are going to be most likely topics for questions. In particular, read in details the recent ceasefire agreement between India and Pakistan and the ongoing LAC disengagement talks between India and China. The best way to prepare on these topics is to read the editorial comments on related issues in good newspapers and formulate your answers.

IX. Questions on social

issues: There are a host of issues that relate to our society, for example, nutritional issues in children, women and the poor, inequality in online education, issues of mental health of citizens during the pandemic, rising domestic violence during lockdown and so on. You must embrace these topics with compassion and offer solutions from both your heart and mind.

X. Controversial questions:

There are many sensitive issues on which taking the right stand may look difficult to a candidate without guidance. My suggestion here would be not to take an extreme stand on them. You may present both sides of the argument, assess their respective merits and present a middle ground. You should not take a stand that sounds anti government. But you are free to point out to failures of the government and suggest better policy measures. Some criticism is always welcome.

You can reasonably hope to get many questions on expected lines with prior preparation so that you are not taken by surprise during your interview.

Q97. Consider the following items

1. Cereal grains hulled
2. Chicken eggs cooked
3. Fish processed and canned
4. Newspapers containing advertising material

Which of the above items is/are exempted under GST (Goods and Services Tax) ?

- (a) 1 only
(b) 2 and 3 only
(c) 1, 2 and 4 only
(d) 1, 2, 3 and 4

Q98. Consider the following statements :

1. The definition of "Critical Wildlife Habitat" is incorporated in the Forest Rights Act, 2006.
2. For the first time in India, Baigas have been given Habitat Rights.
3. Union Ministry of Environment, Forest and Climate Change officially decides and declares Habitat Rights for Primitive and Vulnerable Tribal Groups in any part of India.

Which of the statements given above is/are correct ?

- (a) 1 and 2 only
(b) 2 and 3 only
(c) 3 only (d) 1, 2 and 3

Q99. Consider the following

1. Birds
2. Dust blowing
3. Rain
4. Wind blowing

Which of the above spread plant diseases ?

- (a) 1 and 3 only
(b) 3 and 4 only
(c) 1, 2 and 4 only
(d) 1, 2, 3 and 4

Q100. With reference to organic farming in India, consider the following statements :

1. 'The National Programme for Organic Production' (NPOP) is operated under the guidelines and directions of the Union Ministry of Rural Development.
2. 'The Agricultural and Processed Food Products Export Development Authority' (APEDA) functions as the Secretariat for the implementation of NPOP.
3. Sikkim has become India's first fully organic State.

Which of the statements given above is/are correct ?

- (a) 1 and 2 only
(b) 2 and 3 only
(c) 3 only (d) 1, 2 and 3

EMERGING OPPORTUNITIES IN BIG DATA ANALYTICS

Descriptive Analytics: Descriptive Analytics is the simplest form of data analytics. It looks for particular numbers based on the transactions of any nature. Take the example of a big departmental store selling variety of things. Customers coming to the store may be buying one, two or more items. For each customer one bill is generated containing the name and quantity/weight of the item. By making use of descriptive analytics, the store can find out what and how much of each item has been sold in a day. Weekly, monthly and yearly figures can also be derived. If the store is one unit of a chain, figures for all the units can be combined to get data for the entire chain. Such data is useful in making comparisons and for managing the supply chain. In a way Descriptive Analytics is the base for predictive and Prescriptive Analytics.

Prescriptive Analytics: By looking at prescriptive analytics we can see how far big data analytics has come. Prescriptive Analytics is relatively new and is used to analyze the available data to predict for the future. Most importantly it provides insights as to what steps should be taken based on the data already available and what can be the possible outcomes of taking different steps. Airlines industry is not in good shape now due to pandemic. However in normal times prescriptive analytics is extensively used in this industry to optimize their routes for maximum capacity utilization and efficiency, saving big money for them. This optimization is done on the basis of passenger demand, time taken for individual flights, dominant customer segment etc. An automobile manufacturing company making various models may also use prescriptive analytics to decide the number of units optimally to be produced to meet demand, keep the inventory low and maximize profit.

Predictive Analytics: Predictive Analytics works by identifying patterns in recent data and then using statistics and other tools to make inferences which may be revealing for growing sales and cross-selling. The analysts here attempt to fit the data into a certain pattern. If the data

is following that pattern with some certainty, future happenings (sales, consumption, population growth, pass percentage etc.) can be predicted. Predictive Analytics can tell if a customer buys a certain product, what other products she is likely to buy together with that. Finding such relationships between products is called affinity analysis. Such analysis can also tell us which countries a particular segment of tourists are likely to visit when travelling to more than one country or in which months a particular tourist place will have maximum tourists or what is the spending pattern of a particular segment of tourists.

The above ways of analytics are used in different disciplines of business and it is possible to specialize in one or more of them. We are talking of Human Resource (HR) analytics, marketing analytics, financial analytics, digital media analytics etc.

Education: In last few years a number of courses in big data analytics have been introduced at different institutes. In some courses you are taught big data analytics as one of the subjects, in some this is offered as specialization whereas some courses are exclusively devoted to the above. You can also find a course which is offered as a combination of big data analytics and some related subject such as machine learning. Also big data analytics may sometimes be referred to as business analytics, data analytics or simply analytics.

Data analytics is taught both as a technical and managerial subject. So one may find courses like B.Sc., B.E., B.Tech, BBA with data/business analytics. In the same way there are courses like M.Tech (big data analytics) and MBA (business analytics) or with similar nomenclature.

Course coverage: A data analytics course has topics like-

Introduction to data and big data, data types and characteristics of data, data warehouse, database, data mining, classification of analytics, statistical methods, Structured Query Language (SQL), business intelligence, information extraction, pattern recognition, natural language processing, data architecture,

Hadoop, machine learning, correlation analysis, linear regression, decision tree, time series models, demand management forecasting etc.

Data analytics is highly dependent on Hadoop which is a software framework for storing data and running applications on clusters of hardware. It provides massive storage for any kind of data, enormous processing power and the ability to handle large number of concurrent tasks or jobs. It is an open source programme. Python is another extensively used tool.

Where to study?

Indian Institute of Management, Kolkata; Indian Institute of Technology, Kharagpur and Indian Statistical Institute Kolkata jointly offer a unique 2 years Postgraduate Diploma in Business Analytics in which each institute will focus on a separate area of Business Analytics and students will be attending the course at all the three institutes one by one.

Indian Institute of Science, Bengaluru conducts- M.Tech. in Computational and Data Science

Indian Statistical Institute offers one year Postgraduate Diploma in Statistical Methods and Analytics (Chennai/Tezpur centre) and Postgraduate Diploma in Statistical Methods and Applications (Tezpur centre)

IIT, Bhubaneswar-M.Tech. in Data Science and Artificial Intelligence

IIT, Delhi- Integrated M.Tech. in Mathematics and Computing

IIT, Dhanbad- M.Sc. in Mathematics and Computing

IIT, Guwahati/Jammu/ Palakkad, Kerala-M.Tech in Data Science

IIT, Jodhpur-B.Tech (Artificial Intelligence and Data Science), M.Sc. - M.Tech. Dual Degree in Data and Computational Science

Indian School of Business, Hyderabad/ Mohali-Advanced Management Programme in Business Analytics

IIM, Ahmedabad-e Post Graduate Diploma in Advanced Business Analytics

IIM, Indore-Integrated Programme in Business Analytics

IIM, Trichy-PG Certificate Programme in Business Analytics and Applications

IIM,Kashipur/Ranchi-MBA (Business Analytics)

Rajiv Gandhi Institute of Petroleum Technology, Amethi, Uttar Pradesh- MBA (Business Analytics)

Centre for Development in Advanced Computing -Post Graduate Diploma in Big Data Analytics

Xavier Labour Relations Institute, Jamshedpur- Post Graduate Certification in Business Analytics

IIM, Bengaluru-Programme in Business Analytics and Intelligence

For working professionals International Institute of Information Technology, Bengaluru has an Executive Postgraduate Programme in Data Science.

The above is an indicative list

For an undergraduate course in data analytics, you need to have completed your 10+2 with science and maths subjects. For a postgraduate technical degree, you need to be an engineering/technology graduate. Admission to MBA may be open to graduates from various disciplines. IITs may have uniform requirements for courses conducted by them, for other institutes admission eligibility norms differ which aspirants should check.

With qualifications like Bachelor/ Master of Computer Applications (BCA/MCA) also, one may plan to inter

the world of data analytics, with additional training.

There are free online courses dealing with data analytics available on internet. Though these may not lead you to an established job, at least it may give you some idea and an opportunity to check if the subject indeed interests you.

Many private universities and colleges have though introduced courses in data analytics, some of them may not have the required infrastructure/well equipped teaching professionals. So you need to be careful in choosing the institute and judging the course credentials.

Where big data analytics is used?

Big data analytics is of use for every business and organization that wants to derive patterns from data for various purposes. Suppose a big information technology company is facing high rate of attrition. By analyzing the data of the employees (including the inputs obtained during exit interview) who have left, the organization can among others, learn things like- average time spent before leaving, age group of the leaving persons, the most common causes for leaving, gender (male/ female), demographics (rural/urban etc.) based patterns and then may take steps to lower the attrition rate. For instance if rate of attrition is higher for male employees, the organization may decide to hire more females. Another example can be of a bank with branches spread all over the country. By using analytics, the bank may find out which segment of customers is generating highest profits for it (to formulate strategies to gain their loyalty), which product/service has least takers (either to bring improvements or discontinue these altogether) etc. These are basic and simple applications of analytics. Much deeper insights can be found out from big data analytics for transforming or overhauling business strategies.

Who employs big data analytics professionals?

Though big data analytics is of recent origin, it has found wider acceptability and professionals in this area are in much demand. As a practitioner of big data analytics, you may find opportunities in IT companies, telecom companies, hospitality groups (hotels/ travel agencies), airlines, shipping companies, banking, finance and insurance (BFSI), stock exchanges, broking houses, mutual funds, hospital chains, automobile companies, e-commerce operators, logistics companies, industrial houses, universities, fast moving consumer goods companies, entertainment industry (film/TV serial/music production companies) etc.

As more and more educational institutes are launching courses in big data analytics, there are enough opportunities in teaching roles. However to be effective in this role you need to have some practical exposure as just academic knowledge wouldn't suffice.

Skill set required: Big data analytics is one of those specialized areas which requires a person to have specific skills and traits which include ability to see the big picture and dealing with complex data, analytical skills, rational thinking as well as critical thinking.

It is said that analytics can convert data to knowledge to wisdom. If you're interested in this journey to wisdom big data analytics may be meant for you.

Covaxin found to neutralise 617 variant of Corona virus, says Dr. Fauci

Covaxin, India's home-grown COVID-19 vaccine, has been found to neutralise Double Mutant or 617 variant of the Corona virus. This was stated by White House chief medical adviser and America's top pandemic expert Dr Anthony Fauci. The statement comes days after Indian Council of Medical Research announced that Covaxin is effective against the Double Mutant. Dr Fauci said despite the real difficulty that we are seeing in India, vaccination could be a very, very important antidote against this. Developed by Bharat Biotech in partnership with National Institute of Virology and Indian Council of Medical Research, Covaxin was approved for emergency use on January 3. Trial results later showed the vaccine has an efficacy of 78 per cent.
